

## Press Release

### Rapid growth of Galileo Group continues in 2007

***An 87% increase in revenue is driven by a surge in software sales of the Conigma™ Change and Configuration Management Solution and new substantial orders for professional services.***

**Las Vegas, October 3, 2007** – The Galileo Group AG, one of the leading suppliers of software solutions for application and transport management for use with SAP® applications, has announced that the company's revenue for the first six months of 2007 rose by 87% compared with the same period of the previous year, accompanied by an increase in profitability. In comparison with the second half of 2006, revenue has grown by 38%.

These figures mean that the Galileo Group has significantly surpassed its own growth forecast, with performance well above the industry average, as was also the case during the previous year.

During the first half of 2007, Conigma™ CCM Release 3.1 was launched. Major developments in this new version relate to the security model and workflow. Functionalities such as the four-eye principle, explicit release and substitution control are now possible. In addition, requirements for IT compliance - Sarbanes-Oxley or GOBS, for example – can be met far more efficiently. Furthermore, the release-planning functionality has been considerably expanded, so now complex change and delivery processes independent of location or client can be fully automated.

"Our Conigma software has enabled us to secure more major clients, including a German industrial company's software factory located in Asia, but we have also made significant advances in the service industry sector," explained Malte

Klassen, CEO of Galileo Group. "A particularly significant example of this is an order from a Japanese enterprise, producing high-tech investment goods. For this implementation, we are developing middleware for use with SAP applications, which will play a crucial role in the company's service environment. It is being configured to handle yearly transaction volumes at the top end of the seven-figure scale."

"This sound commercial basis provides us with more opportunities to invest in our software business, building on Conigma CCM to expand our leading position in the sphere of change and configuration management solutions for use with SAP applications," adds Josef Huber, Vice President Sales and Marketing at Galileo Group.

Today's announcement was made at TechEd '07 Las Vegas, SAP's largest technical education conference.

#### **About the Galileo Group AG**

The Galileo Group AG is one of the leading providers of Application and Transport Management solutions for use with SAP applications. The Conigma suite integrates administration and processes for seamlessly developing, adapting and customizing SAP solutions with existing IT support infrastructure, such as procedures for allocating software (ABAP™, TMS and Java CMS). This results in significant rationalization potential based on the more efficient, automated development and change processes. In addition, IT compliance initiatives are given optimal support by means of wide-ranging workflow functionalities and the detailed recording of all procedural steps.

The clients of Galileo Group include LSV (Landwirtschaftliche Sozialversicherung), Postbank, Siemens AG and Züricher Kantonalbank. Galileo Group AG may be found in the Internet under <http://www.galileo-group.de>.
