Software provider Galileo Group continues to grow and invests in SAP integration solutions

Munich, 03.30.2022 – Galileo Group AG, a leading software provider for turnkey integrations for SAP-centric IT factories and for SAP release, change and transport management, has developed well in the financial year 2021. During this period, the Bavarian software provider was able to further increase its turnover and, above all, win customers with high compliance and automation requirements.

"The SAP market is currently facing a major upheaval," says Malte Klassen, CEO of Galileo Group AG. Today, SAP customers can choose between different operating models for SAP S/4HANA. Fewer and fewer companies are operating their SAP solutions themselves in an on-premise model.

Instead, companies are using the public cloud more than ever as Software as a Service (SaaS), the private cloud and, above all, a combination of both these models in a hybrid SAP world. "We assume that SAP cloud solutions will gradually establish themselves on the market. This would mean that integration solutions for cloud-centric and hybrid SAP landscapes would be in particular demand," explains Malte Klassen.

The Galileo Group has recognised the market demand and has therefore already increased investments in software development in the financial year 2021 in order to optimise and expand the software portfolio: One focus is the Conigma™ Connect software for the integration of all SAP and non-SAP related tools in an IT factory. The Galileo

Group is thus strengthening its leading market position for SAP Application Lifecycle Management (SAP ALM) and will also set standards in the future as an innovative SAP partner in the SAP Cloud ALM environment.

About Conigma™ Software

The Conigma™ software suite consists of several solutions. The core is formed by Conigma CCM for the control and administration of IT processes for SAP change, release and transport management and Conigma Connect for the integration of all SAP and non-SAP related tools in the IT factory. The suite also includes the products Conigma QCopy for software recovery from SAP system copies, Conigma DevSync for synchronisation of parallel SAP development systems and Conigma4Eclipse for integration of functionalities in ABAP in Eclipse. The analysts of Research in Action (RIA) have listed the Cognima software suite in the "Vendor Selection Matrix™ SAP-Centric Application Lifecycle Management SaaS And Software" as Market Leader in the Vendor Selection Quadrant.

About Galileo Group

Galileo Group AG is a leading software provider for Application Lifecycle Management (ALM) in the SAP environment as well as turnkey integrations for SAP-centric IT factories. The Conigma software suite also includes solutions for the integration of SAP and non-SAP related tools in the IT factory, recovery from SAP system copies, synchronisation of parallel SAP development systems and integration of functionalities in ABAP in Eclipse.

The Galileo Group is an authorised and certified software partner of SAP and Microsoft. Numerous medium-sized companies and international corporations, including Fortune 500 and DAX30 companies, choose Galileo Group as a reliable partner. The owner-managed company, founded in 2000, has a branch office in Switzerland in addition to its headquarters in Munich. For more information, please visit www.galileo-group.de.
