Galileo Group Presents Ways to Easily Get Started with SAP Cloud ALM

MUNICH, Germany — September 23, 2022 — The Galileo Group AG, a leading software provider for turnkey integrations for IT factories using SAP® solutions and for re-release, change, and transport management, helps enable businesses that use SAP technology to easily get started with SAP Cloud ALM. The Munich-based company will present its solution approach for the first time at ALM-athon, a hackathon hosted by SAP at the SAP ALM Summit EMEA in Mannheim, Germany, on October 18-22. Galileo Group's mission is to support the operation of both cloud-centric and hybrid SAP landscapes for businesses and to provide hybrid application lifecycle management (ALM) in a heterogeneous IT factory that focuses around SAP solutions. The integration platform, Conigma Connect, is available on SAP® Store and works with SAP S/4HANA® and SAP Solution Manager as well as SAP Cloud ALM.

"This is the first time we are participating in ALM-athon," said Malte Klassen, CEO of Galileo Group AG. "At the hackathon, we will show that with our Conigma Connect solution we can provide businesses that use SAP technology with ways to easily enter the world of SAP Cloud ALM. In doing so, they don't have to throw their tried and tested tools overboard. Rather, we integrate them, and the user companies can simply continue to use them."

Businesses that use cloud-centric technology increasingly appreciate the advantages of these solutions: faster value creation, smaller projects, faster innovation cycles, and lower TCO.

The digital transformation is now a lived, continuous process. As a result, more businesses that use SAP technology are moving their applications to the cloud, thus using software-as-a-service. However, companies still have business applications they operate themselves on-site or with hyperscalers. Hybrid ALM is needed for such IT system landscapes because it integrates the applications from the cloud and the on-premise world.

"Not only the IT and SAP system landscapes, but also their ALM is becoming increasingly hybrid," said Klassen.

In addition, customers naturally also use solutions from other providers for IT service management: the ITSM solution from ServiceNow; the project and program management solutions Azure DevOps or Jira; applications for the analysis and visualization of data, such as Grafana; or test solutions from SAP Enterprise Continuous Testing solution by Tricentis.

Galileo Group showcases solution at ALM-athon
The Galileo Group will demonstrate how these tools can be integrated with the Conigma Connect software as part of ALM-athon, a hackathon for ALM hosted by SAP at the SAP ALM Summit EMEA. The ALM-athon is aimed at SAP partners who use ALM solutions and want to develop their own extensions with the tools. The 2022 challenge is: "How can partner solutions or third-party integrations benefit customers by extending SAP Cloud ALM with standard APIs?" The participating SAP partners start virtually. SAP will select six partners from these participants who can present their solution at the SAP ALM Summit EMEA. The audience will then vote on the best presentation.

SEPTEMBER 2022

About Conigma™ Software

The Conigma™ software suite consists of several solutions. The core is formed by Conigma CCM for the control and administration of IT processes for change, release and transport management for SAP® solutions and Conigma Connect for the integration of all SAP and third-party related tools in the IT factory. The suite also includes the products Conigma QCopy for software recovery from SAP system copies, Conigma DevSync for synchronisation of parallel SAP development systems and Conigma4Eclipse for integration of functionalities in ABAP in Eclipse. The analysts of Research in Action (RIA) have listed the Cognima software suite in the "Vendor Selection Matrix™ SAP-Centric ALM SaaS And Software" as Market Leader in the Vendor Selection Quadrant.

About Galileo Group

Galileo Group AG is a leading software provider for Application Lifecycle Management (ALM) in the SAP® environment as well as turnkey integrations for IT factories focused on SAP technologies. The Conigma software suite also includes solutions for the integration of SAP and third-party related tools in the IT factory, recovery from SAP system copies, synchronisation of parallel SAP development systems and integration of functionalities in ABAP in Eclipse.

The Galileo Group is an authorised and certified software partner of SAP and Microsoft. Numerous medium-sized companies and international corporations, including Fortune 500 and DAX30 companies, choose Galileo Group as a reliable partner. The owner-managed company, founded in 2000, has a branch office in Switzerland in addition to its headquarters in Munich. For more information, please visit www.galileo-group.de.
